Ideation phase

Brainstorm&Ideal Prioritization

Date	**29 September 2026**
Team id	**SWTID-2026-4524**
Team Leader	**M.Mohammed Firdouse**
Team Members	**S.Subash,S.Mohamed Ashik, H.Abdul Arsath**
Project name	**Import Data using Transform Maps (Spreadsheet)**

IDEATION PHASE: FULL PROJECT TEMPLATE

***Project Name:* Import Data using Transform Maps (Spreadsheet)**

- *Date:* 29 September 2026

- *Team ID: SWTID-2026-7867

1. Empathy Map Canvas (Empathize & Discover)

To understand the user's pressures, thoughts, evaluations, and needs.

- *What does he THINK and FEEL?*

- Thoughts: How to import data from Excel / Spreadsheet into the system very quickly?

- Worries & Aspirations: Will there be errors due to data mismatch? Will it map to the correct fields?

- *What does he HEAR?*

- What colleagues and administrators say: Manual data entry takes a lot of time, it needs to be automated.

- *What does he SEE?*

- Complex interfaces and scattered spreadsheet formats.

- *What does he SAY and DO?*

- Say: "We need a way to correctly map all rows and columns in the spreadsheet in one go."

- Do: Wasting time by manually copy-pasting.

- *Pain Points:*

- Data formatting errors, missing fields, and time-consuming manual mapping processes.

- *Gain:*

- Automated, clean, and error-free data import mapping using Transform Maps.

2. Define the Problem Statements (Customer Problem Statement)

Clearly defining the problem from the user's point of view:

- *I am:* A database administrator / system integrator managing bulk spreadsheet data.

- *I’m trying to:* Import external spreadsheet data into the system smoothly using Transform Maps.

- *But:* It is difficult to map source fields to target fields accurately without breaking data consistency.

- *Because:* Manual configuration and complex script mapping lack intuitive guidance.

- *Which makes me feel:* Frustrated, stressed, and exhausted due to recurring import failures.

3. Brainstorm & Idea Prioritization Template

- *Problem Statement (How Might We):*

- How might we simplify the spreadsheet data import process using automated Transform Maps to save time and prevent errors?

- *Brainstormed Ideas & Grouping:*

- Idea 1: Auto-detection of column headers and smart field matching suggestions.

- Idea 2: Pre-built transform map templates for standard spreadsheet formats.

- Idea 3: Built-in error logging and preview before final data commit.

- *Idea Prioritization (Importance vs. Feasibility Matrix):*

- *High Importance & High Feasibility (Top Priority):* Auto-detection of column headers and preview feature (This can be implemented first).

- *Medium Importance:* Pre-built templates for common spreadsheet layouts.
